

Benefits at a Glance

- **Ergonomics**

Avoid „media disruption“, the typical, time-consuming "togglng" between Microsoft® Office applications, where users generally spend most time, and business and professional applications, where the majority of the structured enterprise information resides.

- **Compliance**

Comply with organizational processes, legal and regulatory demands and ensure data quality.

- **Role and Identity Management**

A user's information access level can be set centrally based on role and privileges and without changes on the client. This provides tailored information access and configurable decision rights.

- **Increased Productivity per Mouse-Click**

Increase quality, reduce processing time, all with fewer clicks.

INTELLIGENT COLLABORATION SOFTWARE

Combionic Office Business Gateway 2011:

Relevant Informationen at the right time.

Combionic Office Business Gateway 2011

The Combionic Office Business Gateway 2011 (OBG2011) allows access and processing of enterprise information, provided in business context and directly in Microsoft® Office. For example, this could be:

- Customer data from a CRM System
- Financial data from an ERP System
- Specific data from workflow procedures
- Unstructured information and documents from DMS, Archives or e-mails or
- Cloud Services.

Completing tasks more rapidly requires the right information in the context of the user performing that task. OBG2011 provides the contextual capabilities to deliver relevant information and does this using the universal interface of Microsoft® Office.

Client experiences have shown how the enhanced interface provides important benefits to reduce complexity and provide faster process execution.

Sample Solution Areas

- **Sales representatives** that require full customer information at their disposal, such as pricing information, product specifications, customer interaction history or competitive info.
- **State or local government administrators** in need of a full case history to respond to an approval request, for example for a construction permit, approving fireworks or the request for Sunday work.
- **Engineers** in need of relevant drawings, part descriptions or archived designs when designing new components, for example in the manufacturing or automotive sector.
- **Legal staff** looking to produce relevant documents, cases, citations, topics or terms associated with a legal case in court - irrespective of paper or electronic formats..
- **Banks and Insurances** which need to access full customer histories, service offers and decision making criteria for processing requests.

Content Recognition

OBG2011 identifies the content of a document according to keywords such as (company) name, reference and paragraphs out of structured documents (such as Microsoft® Office documents or Adobe® pdf), e-mails and utilizes it as information objects.

Simplified access to information and data

OBG2011 provides a contextual access to information stored in business focused applications, such as SAP, SharePoint®, SQL Server®, specialized applications or in the cloud.

The screenshot shows an Outlook window with an email from 'info@sampletown.com' to 'Mr. Smith'. The email body contains a meeting proposal. On the right, the Office Business Gateway (OBG2011) interface is active, displaying account details for 'Litware, Inc.' and a list of documents. A red circle highlights the 'Account Details' section in the OBG2011 interface.

Frank Berrbach	Offline

Use OBG2011 everywhere

OBG2011 can be integrated in all Microsoft® Office applications, such as Outlook®, Word, PowerPoint® or Dynamics™ CRM. Retrieve context information in one application, such as Microsoft® Outlook® and maintain that context while opening another, such as Microsoft® Word.

Fewer switching between applications

You don't need to switch between applications to view, edit or update information. Actions can be taken and be completed out of Microsoft® Office, such as the approval of a vacation request directly out of Microsoft® Outlook® by accessing SAP data.
